

> Xiaomi says its humanoids sorted car parts for a full 8-hour shift, no success rate given

In March, Xiaomi reported 90.2% success over 3 hours. Which numbers would show the 8-hour run worked?

> 01 — WHAT HAPPENED_

Xiaomi's humanoids sorted console covers for 8 hours

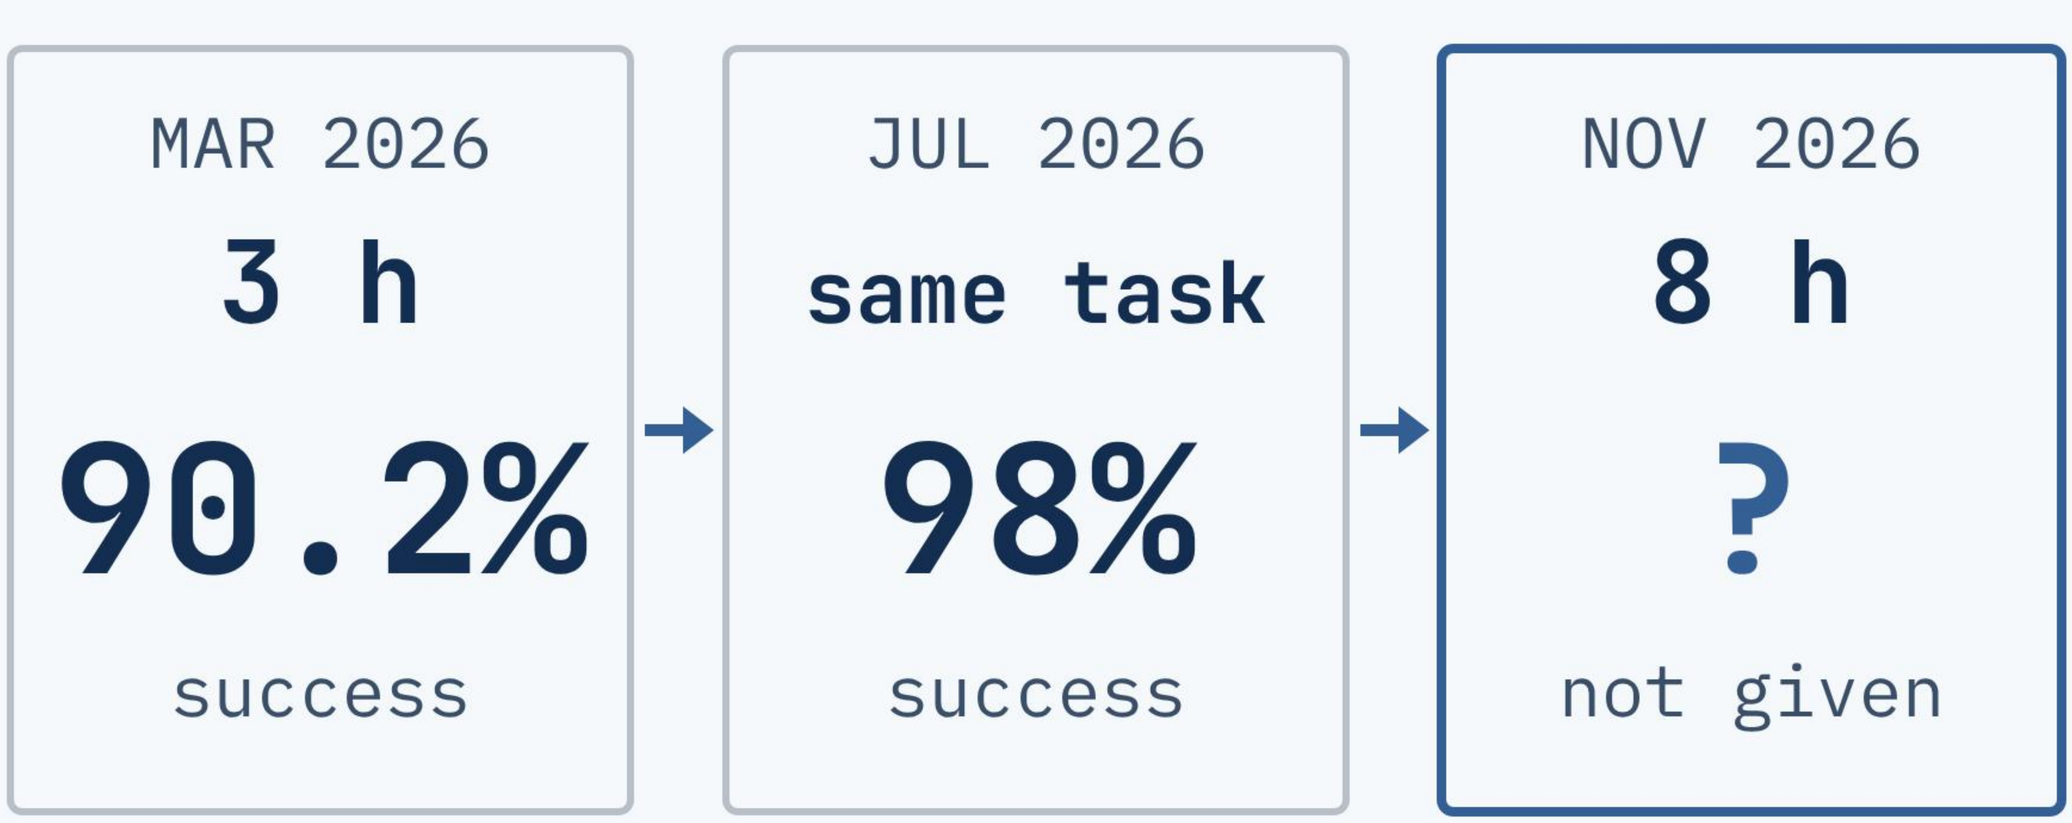

In a video posted Nov. 3, Xiaomi humanoids pull center-console side covers from bins and slot them into racks at its EV factory. Autonomous mobile robots, self-driving carts, bring the bins.

Xiaomi says the robots caught and fixed their own mistakes. A full shift is the bar a factory sets before paying for a robot.

> 02 — THE TRACK RECORD_

Xiaomi's factory trials went from 3 hours to a full shift

In March, a humanoid installed nuts on Xiaomi's Beijing EV line for 3 hours, keeping up with the 76-second cycle time, the time each car gets at that station. The new run is a different job, sorting, and the chart's last box is empty.

> 03 — WHAT'S MISSING_

Xiaomi's 8-hour video leaves out the numbers that count

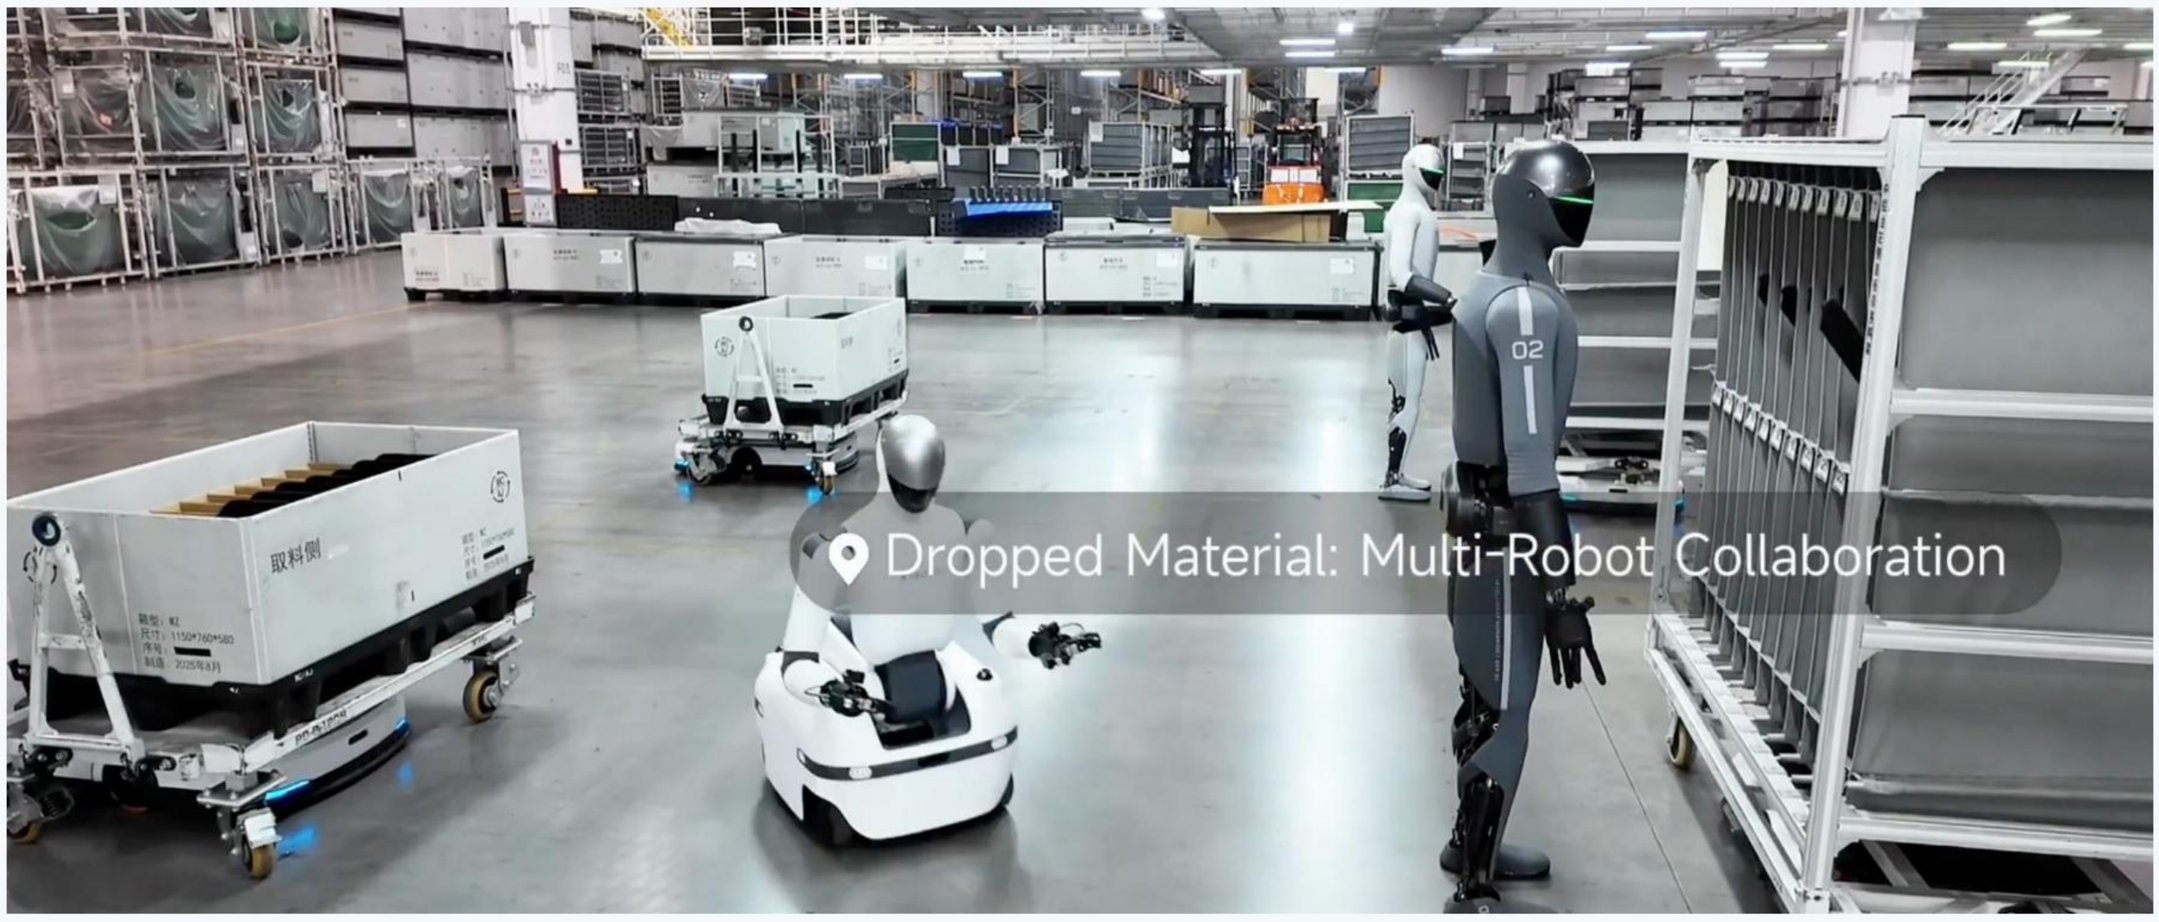

The clip plays at 100x speed, so 8 hours fits in about 4.8 minutes, roughly one pop song. It's labeled "Autonomous", a word robot videos stretch: Tesla's Optimus robots at its 2024 We, Robot event were teleoperated, steered remotely by people.

Xiaomi also didn't say how the robots stayed powered: battery swaps, a cable or charging breaks.

- Parts sorted over the 8 hours
- Success rate across the full shift
- Times a human had to step in

> 04 — THE WHEELED HELPER_

A wheeled Xiaomi robot rolls in when a part drops

At 1:37, in a segment Xiaomi labels "Dropped Material: Multi-Robot Collaboration," a humanoid upper body on a wheeled base comes to help. Electrek argues wheels suit flat factory floors: no energy spent staying upright, steadier under load, room for a bigger battery.

> 05 — WHAT TO WATCH_

Xiaomi wants humanoids across its factories in 5 years

Xiaomi CEO Lei Jun set that goal last December. The 8-hour run is the third public step this year. The proof to look for next is a full shift with parts counted and every human intervention logged.

No product, price or sale date has been announced.

"Another step toward real-world industrial deployment."
